

NDP3® Articulogram instructions

Articulogram pack

These materials should be used under the supervision of a qualified speech and language therapist.

Articulograms are a set of simple diagrammatic cues, representing articulatory features (eg: voice, place, manner and lip posture), which are used in combination with consistent verbal cues to support work on particular aspects of articulation.

The articulograms and verbal cues are designed to give the child information about how to produce a particular feature, for example making a “puff of air” for the voiceless plosives.

Consonant Articulograms

The consonant articulograms were originally published by Stephens & Elton (1986) and have been reproduced as part of the Nuffield Dyspraxia Programme NDP3, with permission of Hilary Stephens.

Nine articulograms, plus two lip shapes from the vowel set, are used to specify all consonants except /r/. The consonant /r/ is not specified, as the place of articulation may vary for individual children. Therapists may add their own cues as appropriate.

Vowel Articulograms

A set of seven lip shapes is used to cue lip/jaw postures for the vowels and the glides /w y/. Diphthongs are specified by sequencing two lip shapes.

The lip shapes can be combined with verbal cues for vowel length and tongue posture to provide a framework for articulation of a standard range of English vowels. Both articulograms and verbal cues should be modified to take into account regional variations.

Fine tuning of vowel quality is achieved through modelling and practice.

A summary of the consonant and vowel articulograms and verbal cues is included on the following pages.

Contents

- **Consonant cards**
- **Vowel cards**
- **Single sound worksheets**
- **CV worksheets**

Consonant and vowel cards include one card for each sound, showing the Nuffield sound cue picture, relevant articulograms and a range of CV syllables. Consonant cards also show the written letter(s) on the front of the card. Verbal cues are shown on the reverse of each card. Sound cards are used in therapy sessions to explain and remind children how to articulate sounds. For further information on eliciting sounds, please see Appendix 6 of the NDP3 therapy manual.

A single sound worksheet is included for each sound, allowing for repeated practice of the one sound. Worksheets show articulograms, verbal cues plus several sound cue pictures. These are ideal for home practice. Verbal cues and instructions can be modified by the therapist for individual children.

A CV worksheet is also included for each vowel and most consonants. Worksheets show the articulograms and verbal cues, Nuffield sound cue pictures for the sound and a range of CV syllables. This allows practice of the sound in a range of syllables and facilitates early sound joining. The focus is on imitating syllables without using the child's existing motor programs for words. CV syllables include both real and non-real words.

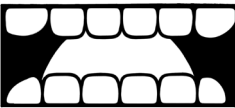

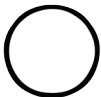

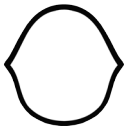

These worksheets are ideal for:

- Children who do not understand concepts of blending sounds to make syllables.
- Children who require a lot of practice in the early stages of therapy.
- Children who are unable to inhibit previous articulatory patterns when attempting real words.
- Children who have difficulty joining sounds in CV syllables.
- Children who have difficulty maintaining accuracy in syllables.

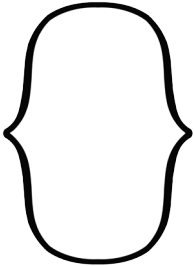

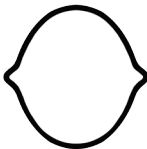

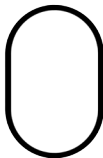

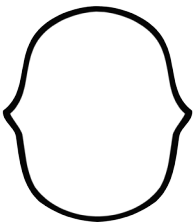

Again, instructions and verbal cues can be modified for individual children. Therapists should check that the child is able to attempt all syllables, and adjust accordingly, before giving as home practice.

For further information please refer to the NDP3 therapy manual.

Consonant Articulograms

Articulogram	Feature specified	Verbal cue	Relevant phonemes
	bilabial	lips together	/ p b m /
	alveolar	tongue on/ behind your teeth	/ t d n s z /
	velar	mouth open, tongue up at the back	/ k g ŋ /
	labio-dental	bite your lip	/ f v /
	lateral	tongue up to touch your teeth	/ l /
	lip rounding	round mouth	/ ʃ w /
	open	mouth open	/ h w j /
	nasal	down your nose	/ m n ŋ /
	fricative	blowy sound	/ f v s z ʃ ʒ /
	voice	voice on	/ b d g v z ʒ /
	aspiration	puff of air	/ p t k /

Vowel Articulograms

Articulogram	Feature specified	Verbal cue	Relevant phonemes
	spread lips	smile	/ i ɪ ɪə aɪ eɪ ɔɪ /
	open, rounded	mouth open (long open)	/ ɑ ɒ /
	round lips	round mouth	/ u ʊ əʊ aʊ /
	neutral, half-open	just open a bit	/ ɜ ʌ ʊ ɪə /
	half-open, spread	open a bit and smile	/ ɛə ɛ eɪ /
	half-open, rounded	open a bit and round	/ ɔ ɔɪ /
	open, spread	wide open (smiley open)	/ æ aʊ aɪ /
